Continuation of 5. does NOT place the application in condition for allowance because: it does not even mention the rejection of claims 20-24 under 35 USC 102(e) as being anticipated by Yu. Furthermore, it doesn't squarely address the rejection of claims 20, 23 and 24 under 35 USC 102(e) as being anticipated by Liu, but instead vaguely discusses amorphous structure (to the extent such is even relevant to the rejection based on Liu, the examiner respectfully notes Liu's disclosure: "After the laser exposure the liquid phase silicon converts back to solid crystalline silicon and the dopants are incorporated into the lattice" - paragraph [0019], last sentence). Finally, the applicant's remark: "since the [Liu] reference does not talk about any type of strained junction, it is hard to believe that one is formed," is not understood, particularly given the fact that the applicant's own specification (paragraph [0023]) evidences that Liu's source/drain regions 122 are strained (by virtue of the different germanium and P-type impurity concentrations therein).
